EDUCATION

B.S. Computer Science (Computing Concentration), USAL University — Expected 2028

CGPA: 3.8/4.0 (4.0 most recent semester)

Coursework: Object-Oriented Programming, Data Structures & Algorithms (Java), Database Management (MySQL), Advanced Programming (Python), Computer Networks, Discrete Mathematics, Linear Algebra

SKILLS

Languages: Java, Python, SQL

Databases & Tools: PostgreSQL, MySQL, Git, GitHub

PROJECTS

Check On | FastAPI, PostgreSQL, React, scikit-learn | Live demo / GitHub — Solo project

- Built a tool that flags prescribing cascades (a drug's side effect mistaken for a new condition and treated with another drug) for elderly users, for the CS Girlies Technology for Wellness Hackathon.
- Chose the data source (openFDA FAERS), designed the database schema, and picked a scikit-learn frailty-risk model, from problem framing through submission.

Nudgy | FastAPI, Google Calendar API, Llama 3.3 70B (Groq) — Gold, Kanz AI Hackathon

- Directed model selection and guardrail design for a multi-tool group-scheduling agent: chose Llama 3.3 70B on Groq for cost-effective testing and constrained tool-calling to prevent out-of-order actions.
- Worked in a 2-person team; teammate led frontend and design.

ClearHead | React, FastAPI, Qwen2.5-72B | GitHub — USAII Global AI Hackathon 2026

- Led frontend, UI/UX, and product direction for a 2-person team, designing the "Shape an Idea" planning flow and an animated focus-state companion; teammate handled backend and LLM integration.

Café Lumière Coffee Shop Management System | Java, Java Swing | GitHub — OOP course, team of 3

- Designed the class hierarchy (abstract MenuItem base class extended by Hot/Cold drinks) for a 3-tier Java desktop café system.
- Built the central controller (CoffeeShopSystem) and the revenue-reporting module, then integrated teammates' inventory and order classes into a working application.

EXPERIENCE & LEADERSHIP

Magic Mirror | Co-creator, Volunteer, Binary Brains Open Day — Oct 2026

- Co-created an interactive smart mirror to show first-year students what creative software can do and how it works: real-time body tracking, touchless hand-gesture menus, and 3D costume try-on running in the browser.
- Runs fully in the browser on an ordinary laptop (MediaPipe pose and gesture tracking, Three.js rendering); students tried it at the open day and downloaded their photos by QR code.

Binary Brains CS Club, USAL | Events Planner — Fall 2026 - Present

- Plan and coordinate events and workshops for the club's fall semester programming.
- Co-leading a new club podcast and directing the design of the club website.

MontoVelina | Contributor (indie games & web design studio), Remote — May 2026 - Present

- Review UI/UX across studio projects and give feedback on how features should look and feel; test builds and report bugs.
- Found and fixed a bug where an attack cooldown was not enforced, which let players spam an ability.

BFMUN Club (Model United Nations) | Co-founder and Coach — 2023 - 2025

- Coached 30+ high school delegates over two years, producing 7 award-winning students.
- Earned Best Delegate (AUBMUN 2025), Best Position Paper (PUMUN 2024), and Honorable Mention (HKMUN 2023).
